

[HS-W1 Pairing SOP: 1 dingle to multiple headsets]

Step 1:

Insert the USB dongle into PC

Step 2:

Take as many as four HS-W1 headsets to be in 15 cm distance with the dongle, and press their power button for 3 seconds simultaneously until the green LED indicators twinkle fast (into re-pairing mode).

Step 3:

After the twinkling-green LED indicators turn into constantly-green, the headsets are all paired with the same dongle and can play music in the same time. [Finished]

[Notes]

1. Once the re-pairing is done, you don't need to re-pair for the second time use.
2. One dongle can support as many as four HS-W1 headsets.
3. When you want to re-pair the headset with its original dongle, just follow the same steps as step1 and step2 to enter into the re-pairing mode:

Insert the USB dongle into PC, take the HS-W1 headsets to be in 15 cm distance with the original dongle, and press their power button for 3 seconds until the green LED indicators twinkle fast (into re-pairing mode).
