Chapter 1 ASUS Splendid

1.1 Introduction

ASUS Splendid Video Intelligence Technology integrates and synchronizes different multimedia data sources to reduce noise and conversion rate for a sharp display. It improves contrast, brightness, skin tone, and color saturation (Red/Green/Blue enhanced independently).

Splendid has six modes to choose: Normal, Gamma Correction, Vivid, Theater, Soft and My Profile.
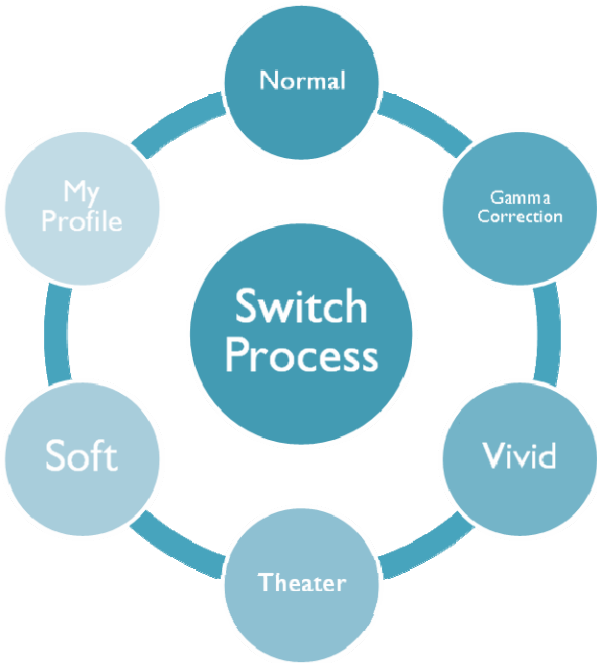

You may install the program via Driver & Utility CD if you cannot find the program from
Start -> All Programs->ASUS Utility and you can use Fn+C as quick switch instant key.   System will show OSD on screen and switch to the next splendid mode.

The switch order is shown as below,

1. Normal
2. Gamma Correction
3. Vivid
4. Theater
5. Soft
6. My profile

1.2 How to use Splendid

1.2.1 User Interface Introduction

You can compare two splendid modes in Splendid Control Panel.

you can choose one
mode of splendid

You can set the Colorfulness and Color Temperature as you like in "My Profile" mode and save the change.
